

Georgia Sightings by Sandra Paradise

Sandra Paradise has released her name and is no longer anonymous. She was previously known simply as the lady who had seen two long-tailed pterosaurs in daylight east of Winder, Georgia, as she was driving to work on highway 82, east of the Barrow County Airport.

She has now revealed two more sightings, in addition to the first two. The third one was when she had a camera in her car but she could not stop in time to photograph it before it flew away. The fourth sighting she was not sure of except that it was probably of the same kind of creature.

Her sketches are copyrighted and she has requested her name be listed as both copyright owner and as the artist. They bear some relationship to the sketch by the witness Susan Wooten, of South Carolina, except that Wooten is not a professional artist. Paradise is.

"1st Glimpse"

Lt brown against dark trees
animal leapt into air above and to right of me
then swooped down, in front of me and slightly
above -
bands or bars or straight lines across belly
fat tummy
flapping hard -
wings made scoop-like motion -
wingspan impossible to gauge due to
foreshortening

head curved - shaped like a hammer, crested,
crest was solid, not feathery.
dark eye.
estimated size possibly 5 or 6 feet nose to tail.

Pterosaurs in Georgia

The lady . . . had been trying to find someone who might help her verify . . . the strange animals that she had seen twice in the past few weeks [in 2008]. . . . Her first sighting was at 7 a.m., the second, 9 a.m., with both mornings overcast . . . Both times she phoned a friend to tell him of her extraordinary experience.

More on Two Pterosaurs in Georgia

To review what these sightings entailed, the lady saw two different flying creatures, two weeks apart, late in the summer of 2008. They were obviously of the same species but

different sizes. The tail was long, with a "heart" shape at tail-end.
